Git was

built to work on

the Linux kernel, meaning that it has had to

effectively handle large repositories from day one.

With Git, nearly all operations are **performed locally**, giving it a huge speed advantage on **centralized systems** that constantly have to communicate with a server somewhere.

Clearly, in many of these common version control operations, Git is **one or two orders** of magnitude faster than SVN, even under ideal conditions for SVN.

using the keyboard shortcut **CTRL +** on Linux, macOS, or Windows. In your terminal, make a directory for a new project and change into that directory...
