

Testing your SSH connection

After you've set up your SSH key and added it to your account on GitHub.com, you can test your connection.

Mac

Windows

Linux

Before testing your SSH connection, you should have:

GitHub Docs

- [Generated a new SSH key](#)
- [Added a new SSH key to your GitHub account](#)

When you test your connection, you'll need to authenticate this action using your password, which is the SSH key passphrase you created earlier. For more information on working with SSH key passphrases, see ["Working with SSH key passphrases"](#).

- 1 Open Git Bash.
- 2 Enter the following:

```
$ ssh -T git@github.com
# Attempts to ssh to GitHub
```

You may see a warning like this:

```
> The authenticity of host 'github.com (IP ADDRESS)' can't be established.
> RSA key fingerprint is SHA256:nThbg6kXUpJWG17E1IGOCspRomTxdCARLviKw6E5SY8.
> Are you sure you want to continue connecting (yes/no)?
```

- 3 Verify that the fingerprint in the message you see matches [GitHub's public key fingerprint](#). ... it does, then type `yes` :

... , then type `yes` :

```
> Hi username! You've successfully authenticated, but GitHub does not
> provide shell access.
```

Note: The remote command should exit with code 1.

- 4 Verify that the resulting message contains your username. If you receive a "permission denied" message, see ["Error: Permission denied \(publickey\)"](#).
